

**AH2314**

## **Course Analysis**

**Date:** Dec 18 2023

### **Examination**

- PROJEKT 4,5HP
- TEN Skriftlig examination 3HP

**Number of students:** 7

**Examiner:** Anders Karlström

**Teachers:** Anders Karlström and Ernst Cederholm

**Passed:** 7/7 by Dec 2023

### **Course evaluation**

The response rate was high, 5/7.

The course was challenging and time consuming, out of which half expressed that it was challenging in a stimulating way. The students expressed that they were working on interesting issues. None expressed that they were not able to practice and receive feedback without being graded. None expressed that they were not assessed fair and honest. 4/5 students expressed that they were able to learn and collaborate with others. 4/5 expressed that they were able to get support when needed.

### **Course analysis**

This was the first time the course was given in this format, so there are a number of items that can be improved to the following course. The computer labs will be reviewed and revised. The lab instructions has been made more clear, after feedback from students. Also, we will delete some items, for instance robust standard errors.

The work-flow of students are quite dependent that students collaborate. For a student that did not find this collaboration, the course was challenging. This should be emphasized and addressed in the next course.

Overall, the mix of learning and assessment activities are instrumental and adequate for the course.

### **Changes from previous:**

This was the first time the course was given in this format.

### **Reflection and Conclusion**

This was the first time the course was given in this format.

Changes will be made, primarily in the course labs.
