

Course analysis for MH2045 for H21

total 36 students was asked to evaluation ,, and 11of then respond. Evaluation report was done in 2022-01-12

some comments are below

1. most of student (around 45.5%) spent 3-5 hours /week. A fair workload, and most of workload is used during the project time.
2. the course as easy to following.
3. the field trip was very good
4. Guest lecture was one of the best aspect of course. Especially those held in person, not in virtual. ,
5. a kind 'freedom' was given student to choose the project topic, and also try to link the project topics to the related subject.
6. From course, one can getting s sustainable point of view over several industrial applications

Suggestion to improving are

- a. that more time in course for the project
- b. the final project presentation is too long, it would be good to make it as two times
- c. be preparation before the lecture, and give question to the lectures.
