

Course analysis
SK2531 Biomedicine for Engineers
2018

The course syllabus can be seen here:

https://www.kth.se/social/files/5c59b73a56be5b12aa379527/SK2531_Kurs-PM_H18.pdf

In autumn 2018, eight students were registered on the course, seven of them participated in the course activities.

Seven students participated in the final exam, with the following **results**:

A – 3 students

C – 2 students

D – 2 students

The lectures went almost according to the plan (there was a little shift in lectures # 7-10, since it took me a longer time than expected for the topic of the lecture # 7).

Attendance level was very good. The **mini-tests** that we have at every lecture were helping the students to keep up with the course pace, and promoted the good attendance.

Unfortunately, only one student answered **the course survey** (which was run via KTH course web as LEQ with 6 major questions). When less than three students answer the survey, the results of the survey are not shown to the teachers. Therefore, all changes in the next year course will be based on the teacher's vision, and not on the students' comments.

The plan for autumn 2019 is to run an extensive update of the course lectures in the part covering cell biology. This is because the course book, Essential Cell Biology, has just got a new edition, where a lot of new material has been added.
